## The new business challenge: work from home

VPNs are congested, fixed hardware won't scale, staff have never worked remotely before and contingency plans aren't working.

*As your business responds and adapts to new ways of working, you may discover its technology limitations*

We cannot scale to meet remote worker demand.

We don't have enough physical devices to give our staff and need to enable bring your own device (BYOD).

We need remote access to business critical systems to service our staff and customers.

We need to ensure security of devices and applications and not compromise our data or environments.

## Access your desktop anywhere, anytime on any device using CMD's Workplace Accelerator

Ensuring flexibility and business continuity in an unpredictable environment, CMD's Workplace Accelerator allows employees to work remotely without compromising productivity, daily business operations or security, using Amazon WorkSpaces.

## Solution Overview

A managed, secure Desktop-as-a-Service (DaaS) solution.

Access to business-critical systems, documents, applications and resources from any device or operating system in a secure and efficient manner.

Provisioning of Windows or Linux desktops within minutes, with the ability to scale to thousands of desktops across the country or the world.

Amazon Virtual Private Network (VPC), providing customers with access to persistent, encrypted storage volumes in AWS Cloud, integrated with AWS Key Management Services (KMS) to ensure the utmost in security.
